## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of group I, claims 1-20 in the reply filed on 8/22/05 is acknowledged. The traversal is on the ground(s) that the search would not be a burden on the examiner. This is not found persuasive because groups I and II are distinct and would require a different search.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Blechner et al (US 4,580,617).

Blechner et al disclose an apparatus for casting molten metal, in particular the dental art. The apparatus comprising a crucible, a heating device (75), a pyrometer (40), and a control device (78) to control melting and casting. The controller is capable of storing parameters for controlling the melting and casting operation in dependence on the melting charge material.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 5-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blechner et al (US '617).

Blechner et al disclose the above claimed invention and control device capable of having a database with parameter sets, whereby associated with each melting charge identification is its own parameter set. The heating device is controlled by the controller. The controller can be used as a calibrator for the pyrometer. The melting charge used can be pure copper. The apparatus can be used to satisfy the claimed invention.

Art Unit: 1725

Blechner et al fails to teach the pyrometer can be directed by means of an optical system.

However, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to use optical system as pyrometer, since that would depend on the design expediency.
